Each team must select one of the following projects to accomplish. For projects (2) and (3), in addition to a full demonstration of what you accomplished, you must write a thorough and detailed report about what you had to learn in order to successfully implement your project. Also, I have only one eye-tracking system and two Kinect systems, so only one team will be able to do project (2) and two teams project (3). If more teams volunteer for either of those projects than can be supported, I will pick a team(s) at random...all other teams will be required to work on project (1).

(1) Develop a “dashboard” for display in the Cyber Café.

(2) Install and demonstrate the Tobii eye-tracking system.

(3) Use the Kinect system to recognize wand movements.
