

**CS 330**  
**Spring 2012**  
**Lab #2**

Before leaving class today, email a report that provides the following:

In Chapter 1 of your textbook, a number of criteria were discussed that could be used with which to evaluate a given programming language, e.g. readability, writability, etc. Many of the same criteria can be applied to the programming environment or IDE used for programming in a language. The IDE used in your earlier courses for Java has been Eclipse. Write a short report that evaluates Eclipse using the criteria described in your book – use only the ones that you think apply easily to an IDE rather than a language. (Note: one criteria you may ignore is orthogonality.)
